|                   | — 3 Meter Contour       |

The **Elevation Contours** (1:5,000) datalayer represents 3-meter contours created from [Digital Terrain Model \(DTM\)](#) data points collected during the production of the [1:5,000 Black and White Digital Orthophoto images](#). This datalayer had previously been a mix of data from the DTMs as well as some 1:25,000 Digital Line Graph (DLG) data obtained from the U.S. Geological Society. As of August, 2002, all older USGS data have been replaced by the 1:5,000 product. This data is maintained by Massachusetts Executive Office of Environmental Affairs, MassGIS, Boston.
